**Manure spreader
VoLLand
model Helios 14 and 14C**

Model Helios 14

- Helios 14 throwing all kinds of manure, lime, peat, sludge and semi-liquid material and used for various transport of agricultural goods;

- chassis: tandem equalizer;
- 2 vertical rotor adapter provides a uniform spreading of manure;
- effective spread width (10 m or more);
- balanced augers bits reduce vibration and ensure a long service life throwing body and high cost work;
- replaceable tine rotor;

- scraper conveyor, driven by a hydraulic drive ensures uniform promotion material with adjustable speed;

- knives adapter with wear-resistant steel construction provides durability and reliability in operation;

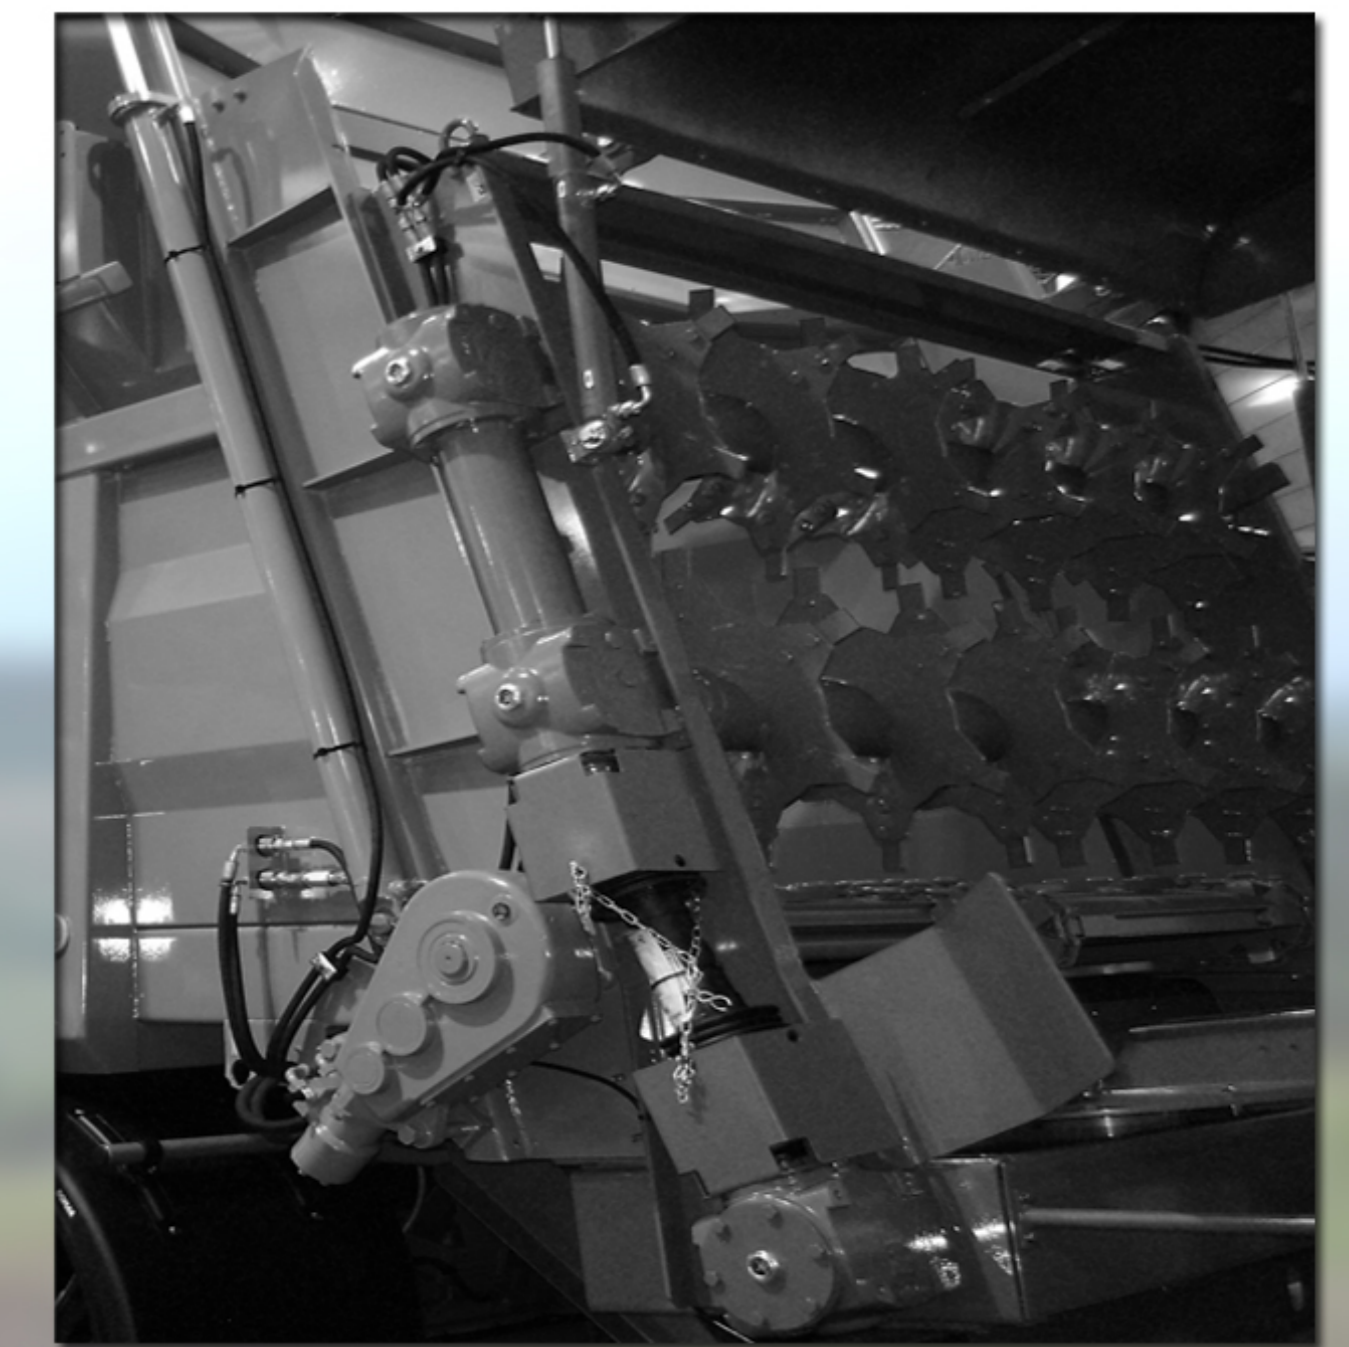

- simple aggregation of the tractor by means of a rotary coupling loops and adjustable height coupling jack;

Model Helios 14C

- Helios 14 C designed for precise application of fertilizers such as compost, chicken manure, lime, ground from septic tanks, defecation all other organic and organic fertilizers;

- high scattering body provides a uniform width spreaders 10 m and more
- milling screws with wear-resistant teeth provide flow evenly chopped mass;
- low pressure tires on the ground through balance-tandem suspension;
- tightness allows the body to transport and even throw very sticky materials;

- reliable scraper with automatic tensioners, drive chains;

- body is a continuous bath with adjustable sides conical shape that increases the capacity of the spreader;

- compact frame design in which the bottom, sides and rear tail guides firmly welded together;

- used as a trailer for the transportation of agricultural products;
